

-
- Midterm problems can be expected to be similar to book problems.
 - The list below contains suggested practice problems from each section. They are good representatives of their respective topics.
 - The book contains hints or answers to all odd problems in the end.
 - In an ideal world, students will recognize that they have already studied more than half of this list during the previous weeks. In reality, if that's not your case, you'll need to cram for it! Better start now.
 - You can ignore any items in these problems where the book asks you to input equations into their DETools engine to observe how a computer calculates things.
 - Notice that there are review exercises at the end of each chapter. These are included as their own separate section here.
-

1.1) 3, 4, 6, 7, 9, 12, 15, 17, 21

1.2) 2, 5, 7, 9, 11, 14, 17, 18, 19, 22, 31, 34, 35, 39, 40, 41

*Note: What the book means by "an ideal answer" for problems 5-24 is an **explicit solution**, as opposed to an implicit solution.*

1.3) 1, 5, 6, 7, 9, 13, 14, 15

Note: In problems 1-6, ignore the book's instructions, and sketch the slope field just like we usually do in class.

1.4) 2, 5, 6, 10, 11, 14

Note 1: You can use a calculator for practice problems about the Euler method. But no calculators will be allowed or needed in the exam.

Note 2: Estimation of error in the Euler method will not be in the exam.

1.5) 5, 6, 7, 8, 10, 11, 13, 14

1.6) 2, 4, 5, 8, 11, 14, 16, 17, 20, 39, 42

1.7) 1, 5, 6, 7, 11, 15, 18

1.8) 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 15, 16, 17, 20, 21

Note: In problems 7-12, the equation is not written in the form we usually write it in class for using the method of undetermined coefficients, but it should not cause any confusion.

1.9) 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 19, 20, 25, 26

Review for chap. 1) 6, 7, 8, 12, 13, 14, 15, 16, 21, 23, 25, 27, 29, 45, 52

2.3) 1, 3, 5, 8

3.6) 1, 2, 3, 5, 7, 8, 9, 11, 21, 22, 23, 24, 25, 26, 27, 28, 38, 39, 40

Note: Ignore item (c) for problems 21-28

2.1) 1, 2, 7, 8, 9, 11, 14, 19, 20

2.2) 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 19, 21, 23, 24, 25, 26

2.4) 1, 3, 7, 8, 9, 10, 13

Note: Problems 7-10 refer to the system on page 194.

2.5) 1, 2, 3, 4, 5, 6
